Screenshot of webpage After changing instance type.

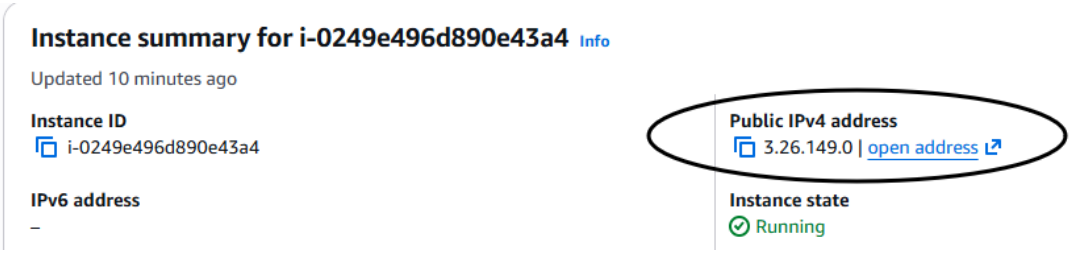

Linux Commands Used

Command	Purpose
`pwd`	Show current directory
`ls -la`	List all files and permissions
`cd /var/www/html`	Navigate to the website directory
`sudo apt update`	Update package lists
`sudo apt install nginx -y`	Install Nginx

`sudo systemctl status nginx`	Check Nginx status
`sudo systemctl enable --now nginx`	Start and enable Nginx
`sudo nano index.html`	Edit an HTML file
`sudo ss -lntp`	Check listening TCP ports
`curl -I http://localhost`	Test the local HTTP response
`sudo tail -f /var/log/nginx/error.log`	Monitor Nginx errors live

Public IP:

- Today I have Learned about how ec2 instances work and how to launch it also Learned about security groups.
- Configured ip and deployed a web application using AWS ec2 instance.
